

TLx84x 电流模式 PWM 控制器

1 特性

- 针对离线和 DC-DC 转换器进行了优化
- 低启动电流 (< 1mA)
- 自动前馈补偿
- 逐脉冲电流限制
- 增强型负载响应特性
- 带有迟滞的欠压锁定
- 双脉冲抑制
- 高电流图腾柱输出
- 内部调整的带隙参考
- 500kHz 工作频率
- 具有低输出电阻的误差放大器
- 设计为可与 UC2842 和 UC3842 系列互换

2 应用

- 任意极性的开关稳压器
- 变压器耦合直流/直流转换器

D 封装 14 引脚 SOIC 顶视图

3 说明

TL284x 和 TL384x 系列控制集成电路提供了实现离线式或直流/直流固定频率电流模式控制方案所需的特性，并使用了最少的外部元件。一些内部实现的电路包括欠压锁定 (UVLO)，其启动电流小于 1mA，以及针对误差放大器输入端的精度进行修整的精密基准。其他内部电路包括用于确保锁存操作的逻辑、还提供电流限制控制的脉宽调制 (PWM) 比较器以及设计用于拉取或灌入高峰值电流的图腾柱输出级。当处于关闭状态时，适合用于驱动 N 沟道 MOSFET 的输出级为低电平。

封装信息

器件型号	封装 ⁽¹⁾	封装尺寸 ⁽²⁾
TLx84x	D (SOIC, 8)	4.90mm × 6.00mm
	D (SOIC, 14)	8.65mm × 6.00mm
	P (PDIP, 8)	9.81mm × 9.43mm

- (1) 如需了解所有可用封装，请参阅数据表末尾的可订购产品附录。
- (2) 封装尺寸 (长 × 宽) 为标称值，并包括引脚 (如适用)。

表 4-1. Pin Functions

NAME	PIN		TYPE ⁽¹⁾	DESCRIPTION
	D	D or P		
COMP	1	1	I/O	Error amplifier compensation pin
GND	9	5	—	Device power supply ground terminal
ISENSE	5	3	I	Current sense comparator input
NC	2, 4, 6, 13	—	—	Do not connect
OUTPUT	10	6	O	PWM Output
POWER GROUND	8	—	—	Output PWM ground terminal
REF	14	8	O	Oscillator voltage reference
RT/CT	7	4	I/O	Oscillator RC input
VC	11	—	—	Output PWM positive voltage supply
V _{CC}	12	7	—	Device positive voltage supply
VFB	3	2	I	Error amplifier input

(1) I = Input; O = Output; I/O = Input or Output

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply Voltage ⁽²⁾	Self limiting		—
V _I	Analog input voltage range, VFB and ISENSE	- 0.3	6.3	V
V _O	Output Voltage		35	V
V _I	Input Voltage, VC and D Package only		35	V
I _{CC}	Supply current		30	mA
I _O	Output current		±1	A
	error amplifier output sink current		10	mA
T _J	Virtual junction temperature		150	°C
	Output energy (capacitive load)		5	μJ
T _{stg}	Storage temperature	- 65	150	°C

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

(2) All voltages are with respect to the device GND pin.

5.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±3000
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±2000

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	TYP	MAX	UNIT
V _{CC} and VC ⁽¹⁾	Supply Voltage			30	V
V _I , RT/CT	Input Voltage	0		5.5	V
V _I , VFB and ISENSE	Input Voltage	0		5.5	V
V _O , OUTPUT	Output voltage	0		30	V
V _O , POWER GROUND ⁽¹⁾	Output voltage	- 0.1		1	V
I _{CC}	Supply current, externally limited			25	mA
I _O	Average output current			200	mA
I _{O(ref)}	Reference output current			- 20	mA
f _{OSC}	Oscillator frequency		100	500	kHz
T _A	Operating free-air temperature	TL284x	- 40	85	°C
		TL384x	0	70	

(1) These recommended voltages for VC and POWER GROUND apply only to the D package.

5.4 Thermal Information

THERMAL METRIC ⁽¹⁾	TLx84x			UNIT	
	D (SOIC)	D (SOIC)	P (PDIP)		
	8 PINS	14 PINS	8 PINS		
R _{θJA}	Junction-to-ambient thermal resistance	117.4	87.9	74.1	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.

5.5 Electrical Characteristics

over operating free-air temperature range, $V_{CC} = 15\text{ V}^{(1)}$, $R_T = 10\text{ k}\Omega$, $C_T = 3.3\text{ nF}$ (unless otherwise noted)

6 Detailed Description

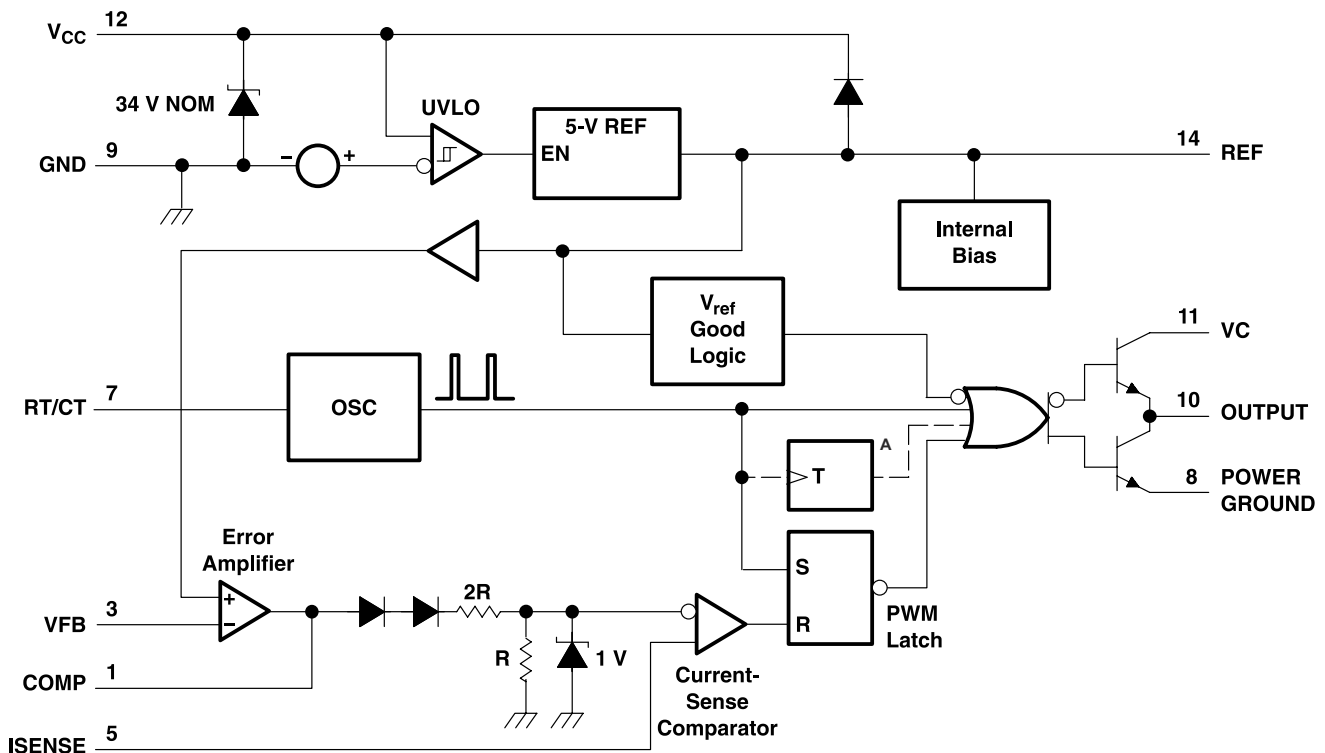

6.1 Overview

The TL284x and TL384x series of control integrated circuits provide the features that are necessary to implement off-line or DC-to-DC fixed-frequency current-mode control schemes, with a minimum number of external components. Some of the internally implemented circuits are an undervoltage lockout (UVLO), featuring a start-up current of less than 1 mA, and a precision reference trimmed for accuracy at the error amplifier input. Other internal circuits include logic to ensure latched operation, a pulse-width modulation (PWM) comparator (that also provides current-limit control), and a totem-pole output stage designed to source or sink high-peak current. The output stage, suitable for driving N-channel MOSFETs, is low when it is in the off state.

Major differences between members of these series are the UVLO thresholds and maximum duty-cycle ranges. Typical UVLO thresholds of 16 V (on) and 10 V (off) on the TLx842 and TLx844 devices make them ideally suited to off-line applications. The corresponding typical thresholds for the TLx843 and TLx845 devices are 8.4 V (on) and 7.6 V (off). The TLx842 and TLx843 devices can operate to duty cycles approaching 100%. A duty-cycle range of 0 to 50% is obtained by the TLx844 and TLx845 by the addition of an internal toggle flip-flop, which blanks the output off every other clock cycle.

The TL284x-series devices are characterized for operation from -40°C to $+85^{\circ}\text{C}$. The TL384x devices are characterized for operation from 0°C to 70°C .

6.2 Functional Block Diagram

A. The toggle flip-flop is present only in TL2844, TL2845, TL3844, and TL3845. Pin numbers shown are for the D (14-pin) package.

6.3 Feature Description

6.3.1 Pulse-by-Pulse Current Limiting

Pulse-by-pulse limiting is inherent in the control scheme. An upper limit on the peak current can be established by simply clamping the error voltage. Accurate current limiting allows optimization of magnetic and power semiconductor elements while ensuring reliable supply operation.

6.3.2 Error Amplifier With Low Output Resistance

With a low output resistance, various impedance networks may be used on the compensation pin input for error amplifier feedback.

6.3.3 High-Current Totem-Pole Output

The output of the TLx84x devices can sink or source up to 1 A of current.

6.4 Device Functional Modes

6.4.1 Shutdown Technique

The PWM controller (see 图 6-1) can be shut down by two methods: either raise the voltage at ISENSE above 1 V or pull the COMP terminal below a voltage two diode drops above ground. Either method causes the output of the PWM comparator to be high (see *Functional Block Diagram*). The PWM latch is reset dominant so that the output remains low until the next clock cycle after the shutdown condition at the COMP or ISENSE terminal is removed. In one example, an externally latched shutdown can be accomplished by adding an SCR that resets by cycling VCC below the lower UVLO threshold. At this point, the reference turns off, allowing the SCR to reset.

图 6-1. Shutdown Techniques

6.4.2 Slope Compensation

A fraction of the oscillator ramp can be summed resistively with the current-sense signal to provide slope compensation for converters requiring duty cycles over 50% (see 图 6-2).

备注

Capacitor C forms a filter with R2 to suppress the leading-edge switch spikes.

图 6-2. Slope Compensation

7 Application and Implementation

备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

7.1 Typical Application

The following application is an open-loop laboratory test fixture. This circuit demonstrates the setup and use of the TL284x and TL384x devices and their internal circuitry.

In the open-loop laboratory test fixture (see 图 7-1), high peak currents associated with loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected close to the GND terminal in a single-point ground. The transistor and 5-k Ω potentiometer sample the oscillator waveform and apply an adjustable ramp to the ISENSE terminal.

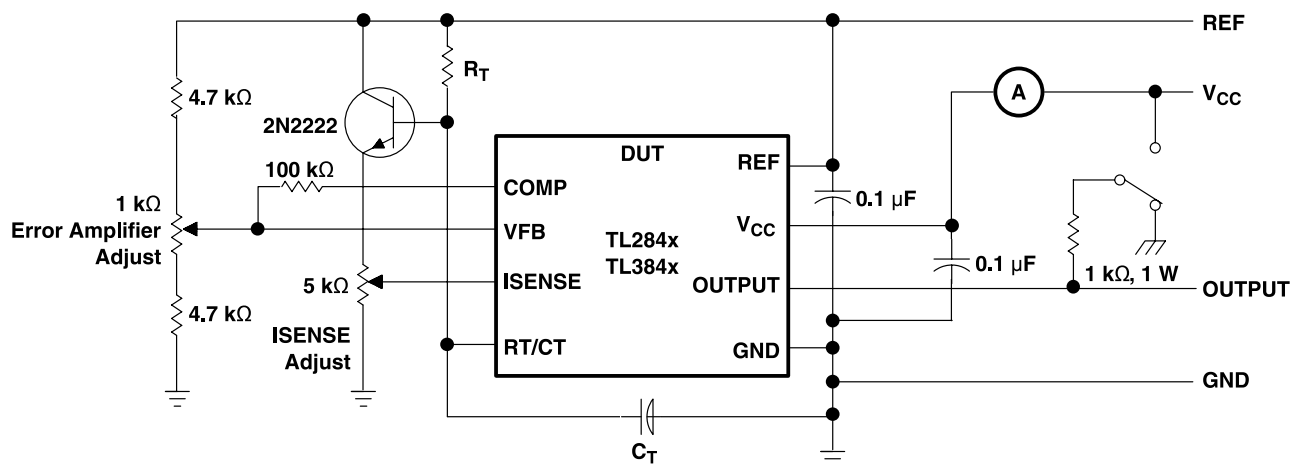

图 7-1. Open-Loop Laboratory Test Fixture

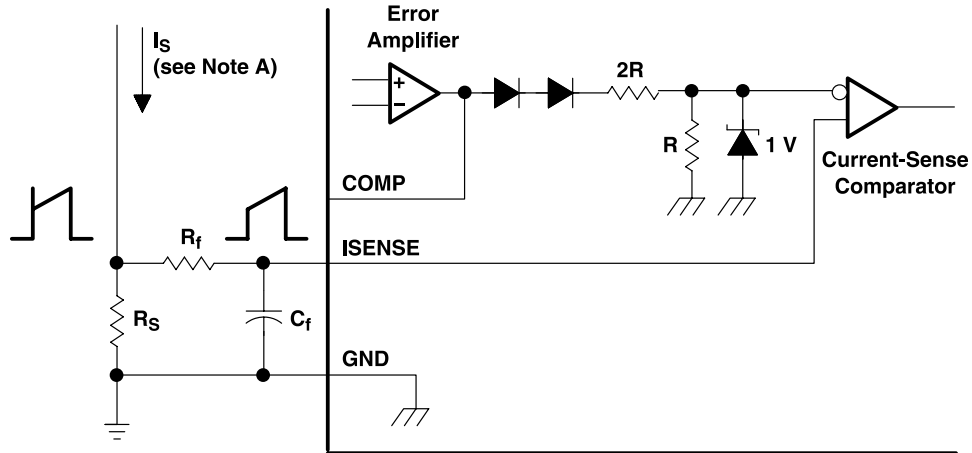

7.1.1 Design Requirements

The design techniques in the following sections may be used for power supply PWM applications which fall within the following requirements.

- 500-kHz or lower operation
- 30-V or less output voltage
- 200-mA or less output current

7.1.2 Detailed Design Procedure

7.1.2.1 Current-Sense Circuit

- A. Peak current (I_S) is determined by the formula: $I_{S(max)} = \frac{1V}{R_s}$. A small RC filter formed by resistor R_f and capacitor C_f may be required to suppress switch transients.

图 7-2. Current-Sense Circuit Schematic

7.1.2.2 Error-Amplifier Configuration

- A. Error amplifier can source or sink up to 0.5 mA.

图 7-3. Error-Amplifier Configuration Schematic

7.1.2.3 Oscillator Section

- A. For $R_T > 5\text{ k}\Omega$: $f \approx \frac{1.72}{R_T C_T}$

图 7-4. Oscillator Section Schematic

7.1.3 Application Curve

The application curve shows oscillator characteristics for chosen capacitor and resistor values.

图 7-5. Supply Current vs Supply Voltage

7.2 Power Supply Recommendations

See [Recommended Operating Conditions](#) for the recommended power supply voltages for the TL284x and TL384x devices. TI also recommends to have a decoupling capacitor on the output of the device's power supply to limit noise on the device input.

7.3 Layout

7.3.1 Layout Guidelines

Always try to use a low EMI inductor with a ferrite type closed core. Some examples would be toroid and encased E core inductors. Open core can be used if they have low EMI characteristics and are located a bit more away from the low power traces and components. Make the poles perpendicular to the PCB as well if using an open core. Stick cores usually emit the most unwanted noise.

7.3.1.1 Feedback Traces

Try to run the feedback trace as far from the inductor and noisy power traces as possible. Also, keep the feedback trace to be as direct as possible and somewhat thick. These two sometimes involve a trade-off, but keeping it away from inductor EMI and other noise sources is the more critical of the two. Run the feedback trace on the side of the PCB opposite of the inductor with a ground plane separating the two.

7.3.1.2 Input/Output Capacitors

When using a low value ceramic input filter capacitor, it should be located as close to the V_{CC} pin of the IC as possible. This will eliminate as much trace inductance effects as possible and give the internal IC rail a cleaner voltage supply. Some designs require the use of a feed-forward capacitor connected from the output to the feedback pin as well, usually for stability reasons. In this case it should also be positioned as close to the IC as possible. Using surface mount capacitors also reduces lead length and lessens the chance of noise coupling into the effective antenna created by through-hole components.

7.3.1.3 Compensation Components

External compensation components for stability should also be placed close to the IC. Surface mount components are recommended here as well for the same reasons discussed for the filter capacitors. These should not be located very close to the inductor either.

7.3.1.4 Traces and Ground Planes

Make all of the power (high current) traces as short, direct, and thick as possible. It is good practice on a standard PCB board to make the traces an absolute minimum of 15 mils (0.381 mm) per Ampere. The inductor, output capacitors, and output diode should be as close to each other possible. This helps reduce the EMI radiated by the power traces due to the high switching currents through them. This will also reduce lead inductance and resistance as well, which in turn reduces noise spikes, ringing, and resistive losses that produce voltage errors.

The grounds of the IC, input capacitors, output capacitors, and output diode (if applicable) should be connected close together directly to a ground plane. It would also be a good idea to have a ground plane on both sides of the PCB. This will reduce noise as well by reducing ground loop errors as well as by absorbing more of the EMI radiated by the inductor. For multi-layer boards with more than two layers, a ground plane can be used to separate the power plane (where the power traces and components are) and the signal plane (where the feedback and compensation and components are) for improved performance. On multi-layer boards the use of vias will be required to connect traces and different planes. It is good practice to use one standard via per 200 mA of current if the trace will need to conduct a significant amount of current from one plane to the other.

Arrange the components so that the switching current loops curl in the same direction. Due to the way switching regulators operate, there are two power states. One state when the switch is on and one when the switch is off. During each state there will be a current loop made by the power components that are currently conducting. Place the power components so that during each of the two states the current loop is conducting in the same direction. This prevents magnetic field reversal caused by the traces between the two half-cycles and reduces radiated EMI.

7.3.2 Layout Example

图 7-6. Layout of D-8 or P Package for TLx84x Devices

8 Device and Documentation Support

8.1 接收文档更新通知

要接收文档更新通知，请导航至 [ti.com](https://www.ti.com) 上的器件产品文件夹。点击 [通知](#) 进行注册，即可每周接收产品信息更改摘要。有关更改的详细信息，请查看任何已修订文档中包含的修订历史记录。

8.2 支持资源

[TI E2E™ 中文支持论坛](#) 是工程师的重要参考资料，可直接从专家处获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题，获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的 [使用条款](#)。

8.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

8.4 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

8.5 术语表

[TI 术语表](#) 本术语表列出并解释了术语、首字母缩略词和定义。

9 Revision History

注：以前版本的页码可能与当前版本的页码不同

Changes from Revision I (July 2016) to Revision J (October 2024)	Page
• 更新了整个文档中的表格、图和交叉参考的编号格式.....	1
• Changed ESD ratings, CDM rating from $\pm 3000V$ to $\pm 2000V$	4
• Changed thermal information for D-8, D-14, and P-8 packages.....	4
• Changed the OUTPUT SECTION: Rise and fall time, typical value from 50ns to 25ns in the Electrical Characteristics section.....	5
• Changed the PWM: maximum duty cycle of TLx842/3B, minimum value from 95% to 92% in the Electrical Characteristics section.....	5
• Changed the TOTAL STANDBY CURRENT, VCC Zener voltage, typical value from 34V to 39V in the Electrical Characteristics section.....	5
• Updated the <i>Typical Characteristics</i> graphs for $I_{discharge}$ vs T_a , Maximum Duty Cycle vs R_t , Deadtime vs C_t , R_t vs frequency, and I_{VCC} vs V_{CC}	6

Changes from Revision H (January 2015) to Revision I (July 2016)	Page
• Updated pinout images.....	3
• Changed TL984x to TL384x in <i>Recommended Operating Conditions</i>	4
• Changed TLx842, TLx844 to TLx842, TLx843 and TLx843, TLx845 to TLx844, TLx845 in <i>Pulse-Width-Modulator Section</i>	5
• Added <i>Receiving Notification of Documentation Updates</i> section and <i>Community Resources</i> section.....	14

Changes from Revision G (February 2008) to Revision H (January 2015)

Page

• 添加了应用、器件信息表、引脚功能表、ESD 等级表、热性能信息表、典型特性、特性说明部分、器件功能模式、应用和实施部分、电源相关建议部分、布局部分、器件和文档支持部分以及机械、封装和可订购信息部分.....	1

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) **MSL, Peak Temp.** - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) **Lead finish/Ball material** - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

D0014A

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4220718/A 09/2016

NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm, per side.
5. Reference JEDEC registration MS-012, variation AB.

EXAMPLE BOARD LAYOUT

D0014A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE
SCALE:8X

SOLDER MASK DETAILS

4220718/A 09/2016

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0014A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:8X

4220718/A 09/2016

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

D0008A

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

NOTES:

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed $.006$ [0.15] per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MS-012, variation AA.

EXAMPLE BOARD LAYOUT

D0008A

SOIC - 1.75 mm max height
