

## CS630 A4H

**General Description:**

CS630 A4H, the silicon N-channel Enhanced VDMOSFETs, is obtained by the self-aligned planar Technology which reduce the conduction loss, improve switching performance and enhance the avalanche energy. The transistor can be used in various power switching circuit for system miniaturization and higher efficiency. The package form is TO-252, which accords with the RoHS standard.

**Features:**

- ! Fast Switching
- ! Low ON Resistance( $R_{ds(on)} \leq 0.28\Omega$ )
- ! Low Gate Charge (Typical Data:13nC)
- ! Low Reverse transfer capacitances(Typical:10pF)
- ! 100% Single Pulse avalanche energy Test

**Applications:**

Automotive、DC Motor Control and Class D Amplifier.

| Wire Bonding     | ○                                                                                                                                                                                                                                                                                    | ○     | ○      | ○      | ○     | ○     |
| Solder           | ×                                                                                                                                                                                                                                                                                    | ○     | ○      | ○      | ○     | ○     |
| Note             | <p>○: means the hazardous material is under the criterion of SJ/T11363-2006.</p> <p>×: means the hazardous material exceeds the criterion of SJ/T11363-2006.</p> <p>The plumbum element of solder exist in products presently, but within the allowed range of Eurogroup's RoHS.</p> |       |        |        |       |       |

**Warnings**

1. Exceeding the maximum ratings of the device in performance may cause damage to the device, even the permanent failure, which may affect the dependability of the machine. It is suggested to be used under 80 percent of the maximum ratings of the device.
2. When installing the heatsink, please pay attention to the torsional moment and the smoothness of the heatsink.
3. VDMOSFETs is the device which is sensitive to the static electricity, it is necessary to protect the device from being damaged by the static electricity when using it.
4. This publication is made by Huajing Microelectronics and subject to regular change without notice.
