

SGM48000/SGM48001/SGM48002

High Speed, Dual Power MOSFET Drivers

GENERAL DESCRIPTION

The SGM48000/1/2 series are dual-channel low-side drivers with typical 2A source and sink current capability. Inverting and non-inverting inputs are both available and three combinations can be chosen for flexible logic application.

The rise time and fall time of SGM48000/1/2 are matched to be 12ns and 13ns respectively, which allows the pulse widths to deliver to the outputs with minimum timing errors and clock skew issues. Unique technique is integrated to achieve minimum overlap of the outputs, which reduces the dynamic switching losses.

The SGM48000/1/2 are available in Green SOIC-8 and TDFN-2×2-8L packages. They operate over an ambient temperature range of -40°C to +125°C.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
